## NEWS RELEASE

File No. 82-3929

### McFAULDS PROPERTY – PRELIMINARY AIRBORNE DATA RECEIVED

December 14, 2007

TSX Trading Symbol: FNC  
S.E.C. Exemption: 12(g)3-2(b)

**Fancamp Exploration Ltd. (TSX Venture Exchange - FNC):** The Company wishes to report that it has received partial preliminary data (NW lines, on 50m line spacing) from the recently commissioned helicopter borne AeroTEM II survey. The survey has confirmed, in more detail, the results of the 2003 reconnaissance Geotem survey, the magnetic and conductive maps of which were the subject of the October 17, 2007 release by the Company, and shows, in particular, the definite linkage of the conductive magnetic high of the Noront Zone with the large, conductive magnetic anomaly on the Fancamp Property, some 300 metres to the SSE. This "Linkage" forms a less intensely magnetic corridor about 150m wide which trends southerly from the SW end of the Noront magnetic feature, for about 300 metres then swings east into the Fancamp ground.

The final airborne report (including the NE/SW 100 m grid portion of the airborne grid not yet received) together with the ground geophysics, which includes a gravity survey, are expected early in the new year. A diamond drill program is planned as soon as possible following receipt of this data.

**ON BEHALF OF THE BOARD**
